neostella
non profit

RPA utilizes software robots to mimic and integrate human actions within digital systems. For nonprofits, this can be as simple as moving data to the cloud to reduce infrastructure costs, or as cutting-edge as using machine learning algorithms to predict donor behavior. RPA can automate:

The extraction of donation transaction data

Autofill data and create donation receipts/letters

Extraction of data from assistance applications and input to ERP

Mail merge and printing letters

Open and scrape email responses for applicant data verification, such as employment status

Generation of compliance and other reports

how does rpa benefit non profits

Donors: Faster recognition and receipt of important tax documents.

Administrators: Automation of behind the scenes functions enables more time to focus on fundraising and donor relations.

Recipients: The automation of the request process means assistance is available more quickly.

how neostella can help

We provide global RPA consulting, development and implementation services designed to free you and your team from repetitive tasks, allowing you to focus on what matters most: innovation and growth.

UIPATH IMPLEMENTATION

PROCESS CONSULTING

RPA DEVELOPMENT

SUPPORT & TRAINING
