## Finance & Accounting

RPA software bots can tackle important but mundane tasks associated with accounting, including financial reporting, compliance, transaction reconciliation and tax preparation. Bots can handle a large volume of data and can complete data entry and other manual processes much more swiftly and accurately than humans. The result is a more efficient accounting team with more time to dive deep into your analytics and provide insights that can help grow your business.

Accounts payable/invoice processing

Accounts receivable

Purchase order (PO) processing

Account reconciliation

Tax estimates

Quoting

Sending disclosures

Cash application processing

Data cleansing/dedupe

Contract compliance

P&L reporting

Administrative reporting

Funds transfer confirmations

Spend less time on tedious work, and more time analyzing your business and developing strategies for growth. Our Neostella consultants and analysts will design solutions that will enable you to spend more time where it matters most. Some of the benefits of automating your Finance and Accounting processes include:

**Reporting:** Automated accounting processes means faster, more accurate reporting.

**Analysis:** With RPA, your team will spend less time inputting and more time analyzing.

**Insights:** Use your business insights for timely strategy and decision making.
