5 iPaaS Terms You Should Know

Integration Platform as a Service

AKA, iPaaS, this is a cloud-based platform that can build integrations between applications, processes, and data, either on-premise or in the cloud.

No-Code/ Low-Code

A no-code/low-code platform uses a visual flow builder so that anyone can create workflows, regardless of their technical background!

ETL

Defined as Extract, Transform, Load, this process consolidates data from multiple sources into one source.

API

Application programming interfaces work to communicate and pass data between external systems.

Connector

In an iPaaS system, connectors are app connections offered out-of-the-box—think Salesforce, Slack, Office365, etc.

Workato's Unique iPaaS Solution

As a leader in iPaaS, Workato combines their integration-led platform with ETL/ELT tools and enables you to build end-to-end workflow automations. Maintain integration and automation flows through any source: cloud, on-premise, files, ERPs, APIs, and data streams. Workato's low-code platform offers thousands of connectors for easy workflow builds in their user-friendly interface.
